

Today, healthcare organizations are striving to deliver targeted, cost effective, personalized care management services that promise improved health outcomes, reduced costs, and meet consumer service and engagement expectations. The Health Research Institute projects 2018 medical costs to be around 6.5% as compared to 6.0% in 2017. There is a need for cutting-edge technology in care management that is cost-effective, smart, integrated and patient-centric.

Challenges in Care Management

CARE Framework – Building a Modern Care Management Portfolio

Nitor's CARE framework helps healthcare ISVs build modern Care Management solutions using advanced technologies like machine learning and AI. The framework provides deep insights, collaborates payer-provider data and improves patient care significantly.

Our Value Proposition

- Automate workflows with role-based access through an intuitive user interface
- Effectively engage and organize daily patient tasks and interventions
- Devise a 360 degree care plan for severe conditions
- Communicate easily with care team members and get critical patient notifications
